

De-Ice

DE-ICE – JOB POSTING

Re: Recently Funded Clean-tech Aerospace Venture Looking for Summer Interns

De-Ice, a clean-tech aerospace start-up, has been recently funded and is looking for business development interns for the summer of 2017.

Our Company

De-Ice is developing the first ever fully electric, complete coverage de-icing solution for the aerospace industry. Our device entirely eliminates all chemicals and de-icing delays, allowing us to save 25 million gallons of glycol and 170 million gallons of water per year in the U.S alone. Additionally, our device is up to 5 times faster and 50% cheaper than any incumbent solution. Our technology weighs as little as 100 pounds and can be retrofitted on any fixed wing aircraft. Our venture owns 100% of our IP and we are going through the Tech Stars Winter 2017 program.

The Role

The business development intern will assist the company in its fundraising, sales, marketing and market analysis efforts. Since our current team is lean, the business development intern will be an integral part of the core team. So while the intern will manage a segment of the company's business side, they will also be responsible for communicating and co-coordinating with other units of the venture.

Background

At least completing a Bachelor's Degree in Business, Finance, Marketing, or similar fields. Prior internship experience preferred.

Our Culture

De-Ice is a high-tech aerospace start-up based out of Greentown Labs. We're developing the first ever fully electric, on-ground de-icing system for aircrafts. We are a flat organization ran by engineers and physicists. We value "smart work" over hard work and believe creative thinking is just as important as analytical prowess. We are looking for people who share our passion for hardware, the aerospace industry, and building companies.

Contact

Interested candidates should contact Ruben Toubiana via email — ruben@deice.io. Please include a brief note about your availabilities (i.e., part-time versus full-time, start-date and end-date).
