

Intern: Front End Web Developer Intern

Dates: starting July 2020

Contact: laurent.meunier@spare-it.com

[Spare-it](#) is a rising clean tech start-up based in [Greentown Labs](#) (Somerville, MA)

Spare-it is a data driven waste reduction engagement platform. We compute waste streams to engage employees with live data in reduction competitions and become a true catalyst for sustainability in their workplace

We recently closed our Seed funding. Spare-it is looking to expand its technical team in order to create an online application to accelerate the deployment and monitoring of fleets of thousands of connected sensors to track waste streams.

Front End Web Developer roles and responsibilities

The Web Developer will participate in the development of an online tool to manage a fleet of connected sensors enabling to track waste streams. He will work with a technical team including a UX designer and the CTO.

In collaboration with the Technical Team (CTO, Back-End developer, UX Manager), s/he will:

- develop the front-end interface to create an easy to use fleet management experience
- build, test and deliver through a continuous integration development process on AWS
- put in place all levels of testing required to ensure the quality of the delivered code

The ideal candidate will have a passion for web development and sustainability, driven by the difference s/he can make for the planet with a mix of the following personal and professional characteristics:

- proficient in React / Redux / MaterialUI
- proficient with Git / bitbucket
- experience with Agile/SCRUM methodology
- knowledge of AWS cloud deployment (Amplify)
- ability to collaborate remotely efficiently and use online tools (Google Suite, Slack...)
- driven by human values such as trust, transparency, respect, and kindness
