

Secure the Future of the Grid

Director of Product Management

Remote, Denver, CO, or Boston, MA / Full-Time

We are a rapidly growing technology company, helping our utility partners around the world lead the energy transition by enabling enhanced grid flexibility, resilience, and security. At LineVision, we provide electric utilities with our patented non-contact sensors to provide the real-time monitoring and predictive analytics needed to secure the future of the grid.

We are looking for a **Director of Product Management** who will play a pivotal role in our organization working cross-functionally with our commercial and technology teams to drive enhancements to our current offerings, develop new features and products to delight our clients, enabling continued growth and impact.

What will you do?

You'll be bringing our products to life by defining our product specifications and crafting the user experience while focusing our work on the most impactful development priorities and shaping the long term roadmap. You will:

- Design and architect the new features and products needed by our clients by working with the sales, engineering, and technical development teams
- Act as the Product Owner in the Agile/Scrum team sprints held by our developers.
- Define the user stories for our product specifications by providing clarification, story acceptance criteria, and refinement.
- Develop, iterate, sketch and communicate how our users will interact with their data and share this with the software development teams who will bring them to life
- Provide testing, feedback, and validation of the new features in development
- Conduct customer and stakeholder interviews, blueprinting sessions, feedback meetings and elaborate on client personas and use cases.
- Develop and manage a structured approach to prioritizing product development candidates, factoring in input from sales & clients, market dynamics, development costs, and risk factors. Translate work requests into actionable user stories and work units

What do you need to succeed in this role?

- Expertise in agile methodology and previous experience with Atlassian Jira software.
- Demonstrated communication skills to effectively define customer needs and the ability to break down problems into smaller units of work and estimate the effort required to complete them.
- Previous experience assessing a competitive market landscape to maintain an informed vision for where the market is headed in the near, mid, and longer term to aid roadmap development

- Knowledge of electric Transmission & Distribution (T&D) equipment, the industry, and what drives a utility client to invest in innovative technologies
- Demonstrated ability to consistently apply rigorous attention to detail, work ethic, professional integrity, and organizational skills

What does joining LineVision mean for you?

- **Impact.** Your talent, time, and energy will critically impact our success in providing utilities around the world with solutions to increase the flexibility, efficiency, and safety of their grids for a cleaner and electrified future
- **Growth.** You will work with a high-performing team to maintain LineVision's leadership in the \$12B global market for line monitoring and dynamic line ratings.
- **Distinction.** You'll be doing your part to accelerate the clean energy transition by working with our innovative grid enhancing technology.
- **Ownership.** Acting on the voice of the customer, your input will be guiding the future product roadmap and the evolution of how electric utilities operate their grids.
- **Compensation.** You are vested in a high-potential success story, with competitive compensation, benefits, and comprehensive PTO and leave policies, complemented by stock options in a high-growth company with world-class venture capital backing

Who we are...

- We are a team of dedicated individuals who are passionate about helping to solve the biggest challenges facing today's electric grid
- We believe unlocking transmission capacity is critical to the resilience of our future grid and the ability to integrate renewables at scale
- We value and benefit from the wide-ranging perspectives that come from a diverse and inclusive work environment
- *We are committed to providing:*
 - Situational awareness to help grid operators make informed decisions on the physical position of their conductors that can help to prevent damage and fires
 - Dynamic Line Ratings to increase capacity by up to 40% on existing transmission lines with real-time monitoring while improving reliability & safety
 - Asset health monitoring to improve maintenance strategies by creating a digital twin to determine the true conductor health
