3D Printing Technician (Internship)

Kornit Digital AMT is pioneering the field of multi-material additive manufacturing. In the past, additive manufacturing has been limited by the types of materials that can be used to create objects, and most platforms have focused on the printing of single material parts for prototyping. Our system enables the fabrication of functional parts using engineering grade reactive elastomers with zonally tunable material properties and high resolution color images. This cutting edge technology is currently being applied to fabricate functional athletic shoe uppers and apparel at a manufacturing scale.

Job Title: 3D Printing Technician (Internship)

Location: Somerville, MA

Timeline: December 1st - April 1st (flexible end date), minimum 35 hours per week

Pay: \$20/hour

Job Summary:

You will be responsible for independently running 3D printers to manufacture parts for an important customer. You will learn to print with the system, maintain and service important assemblies in the machine, and perform quality control on printed samples.

Job Duties and Responsibilities:

- Manage printing on multiple machines simultaneously
- Conduct equipment maintenance
- Perform quality control on printed parts and record data
- Take an active role in the process development and provide technical feedback

Preferred Skills:

- Self-motivated
- Team player
- Hands on
- Attention to detail
- Strong collaboration skills
- Experience in working with mixing and dispensing equipment
- Enjoys building and making things work
- Enjoys learning new skills quickly
- Positive attitude
